TO RECUITING TEAM,

As a senior pursuing a B.S. in Computer Science at Bellevue College, I'm excited by the opportunity to apply for the Software Development Intern position at NeueHealth. Your mission to transform healthcare into a seamless, value-driven experience directly aligns with my experience building full-stack applications that emphasize accessibility, efficiency, and collaboration across teams, from frontend logic to backend APIs.

Recently, I led backend development for a real-time **Balance Assessment Tool**, a project inspired by the need for accessible frailty assessments. I implemented the server using **Express.js**, integrated a real-time score updater, and worked closely with my team through Git-based version control and CI/CD pipelines. My experience spans JavaScript, SQL, and full-stack development, aligning well with your team's needs.

At NeueHealth, the mission of creating consumer-centric and value-driven healthcare resonates deeply with me. I thrive in collaborative environments where I can grow by contributing to meaningful solutions, whether it's debugging features, participating in code reviews, or exploring automation opportunities that improve scalability and efficiency.

I am enthusiastic about the opportunity to support NeueHealth's development team and learn within a remote-first, cloud-forward setting. Thank you for considering my application, I look forward to the possibility of contributing to your innovative work.

With Gratitude,

THUY NGUYEN
